CHALLENGE OF ELECTRIC MOBILITY

**Difficult to find
available chargers**

**No unified, real-time
system**

**Range anxiety for EV
drivers**

Number of Electric Car Users Across the Years
in Tunisia

National Agency for Energy Management (ANME) and the Ministry of Industry, Mines and Energy

HOW EV OWNERS ACT TODAY

They search manually
on Google Maps

They depend on foreign apps
like PlugShare, ChargeMap

They rely on Facebook
groups & random word-
of-mouth

OUR SOLUTION

HOW IT WORKS?

Discover nearby stations

Navigate to the nearest charger

Apply filters or view details

BUSINESS MODEL CANVAS (BMC)

MISSION - VISION - RAISON D'ÊTRE - AMBITION

Mission: Connect EV drivers to the nearest, available charging stations in Tunisia via a real-time platform.

Vision: The leading smart mobility platform and electric transport reference in North Africa by 2030.

Raison d'être: Drive Tunisia's green transition by eliminating EV "charging uncertainty."

Ambition: Integrate with Tunisia's national digital mobility network and expand regionally through partnerships.

PROBLEM

- No real-time, centralized database for charging stations.
- Drivers experience "range anxiety" without live data or optimized routes.
- Station concentration in major cities leaves intercity travel underserved.

VALUE PROPOSITION

- **EV Drivers:** Real-time map showing accurate charger availability, type, and status with route optimization.
- **Energy Operators:** Data dashboards on charging demand, load distribution, and maintenance.
- **Government/Municipalities:** Insights for urban planning and CO₂ reduction tracking.

SOLUTION

A web and mobile app providing a real-time, interactive map of charging stations with smart navigation and user filters.

EXISTING ALTERNATIVES

- **Google Maps**: Lists few charging points, no live updates, limited Tunisian coverage.
- **PlugShare / ChargeMap**: Useful abroad but lacks local data and Arabic/French localization.
- **STEG Website**: Shows fixed station list, not interactive.
- Conclusion: SmartCharge TN is the first real-time, Tunisia-specific geospatial EV charging platform.

STAKEHOLDERS

- **EV owners** (Tesla, BYD, Renault Zoe users).
- **STEG** and private **energy operators**.
- **Municipalities** (Tunis, Sfax, Sousse).
- **Ministry** of Environment, Ministry of Transport, Ministry of ICT.
- **Startups** in the renewable energy ecosystem (e.g., WattNow, Touensa Green).

CHANNELS

- **Mobile app** (Android/iOS) – main user entry.
- **Web platform** – for municipalities and partners.
- **Social media** campaigns – Instagram, LinkedIn, Facebook.
- Partnerships with **car dealerships** (Renault, Hyundai Electric Tunisia).
- Integration with **smart city dashboards** (e.g., “Smart Sfax Initiative”).

POSITIVE SOCIETAL IMPACTS (DIRECT & INDIRECT)

Direct:

- Reduces CO₂ emissions by facilitating EV adoption.
- Builds public confidence in clean energy.
- Saves users time and energy with efficient routing.

Indirect:

- Stimulates private investment in charging infrastructure.
- Creates green jobs in mobility, GIS, and IoT.
- Supports Tunisia’s 2030 National Energy Transition Strategy.

NEGATIVE SOCIETAL IMPACTS (DIRECT & INDIRECT)

Direct :

- Grid strain from increased electricity demand.
- Potential misuse of user location data.

Indirect :

- Digital exclusion of users without smartphones or internet.
- Environmental impact of cloud servers.

KEY ACTIVITIES

- **Mapping** and updating Tunisia's **charging points** (data scraping, partnerships).
- Developing and maintaining the SmartCharge **web and mobile apps**.
- Integrating **real-time GPS** and IoT data from stations.
- Running user **tests** and **interface** improvements.
- **Marketing**, partnership outreach, and training for stakeholders.
- **Analyzing** mobility and energy data for reporting and insights.

CLIENTS - KEY PARTNERS - ECOSYSTEM - GOVERNANCE

Clients:

- Individual EV owners and fleet operators.
- Charging station operators (private and public).
- Municipal and government bodies.

Key Partners:

- STEG (Tunisian Electricity & Gas Company).
- Ministry of Environment & Transport (policy support).
- Municipalities for urban deployment.
- University partners (ENIT, IIT, INSAT) for R&D and data integration.
- Private charging providers (e.g., Enersol, Tunisia Green Mobility).

Governance:

Operated as a public-private innovation project ensuring data transparency, sustainability, and alignment with Tunisia's smart city vision.

REVENUE & REDISTRIBUTION

Revenue Sources:

- Freemium model: free basic use, premium paid route optimization (≈ 10 TND/month).
- B2B subscriptions for analytics dashboards (≈ 500 – 1000 TND/month per client).
- Advertising and sponsorships from EV brands or green tech.
- Data insights to energy providers and municipalities.

Redistribution:

- 40% reinvested in infrastructure and app maintenance.
- 30% to R&D and innovation.
- 20% for staff salaries and training.
- 10% to public awareness and sustainability campaigns.

RESOURCES (USE - OPTIMIZATION - CIRCULAR DIMENSION)

Financial: Supported by seed grants from green innovation programs (“Startup Tunisia,” EU Green Deal).

Natural/ Energetic: Renewable-powered data servers (AWS North Africa Green Zone).

Technical: GIS stack (PostGIS, Leaflet, ArcGIS), navigation APIs, IoT integration.

Human (Skills): 3 GIS developers, 2 backend engineers, 2 mobile developers, 1 data scientist, 1 marketing & sustainability officer.

Optimization: Smart routing minimizes travel and power waste; promotes efficient electricity consumption.

COSTS & INVESTMENTS

Fixed Costs:

- App & platform development ($\approx 40,000$ TND).
- Server hosting & map API licensing ($\approx 5,000$ TND/year).
- Marketing and branding ($\approx 3,000$ TND).

Variable Costs:

- Maintenance & data updates ($\approx 1,000$ TND/month).
- Staff & operations ($\approx 4,000$ TND/month).
- Partnership fees / open data access.

Investments:

- Predictive analytics R&D.
- IoT sensors integration pilot in Sfax.
- Scaling to other cities and regional expansion.

USE CASE DIAGRAM

Product backlog

User Story N	As a	I want to	So that	Acceptance Criteria	Status	Priority	Estimation
User Story 1	Charger User	see all nearby charging stations on the map	I can locate the closest charging point	- Map loads with all available stations. - Station markers appear with names and types. - Zoom and pan work smoothly.	✔ Completed ▾	● High ▾	8
User Story 2	Charger User	create an account using email or social media.	I can access personalized features securely	- User can register via email or Google/Facebook. - Verification email is sent. - Successful login redirects to dashboard.	✔ Completed ▾	● High ▾	8
User Story 3	Charger User	see the station's real-time status (occupied/free)	I can avoid unavailable chargers	- Status updates every few seconds. - Color-coded indicators (green/red). - Data fetched from live API.	✎ In progress ▾	● High ▾	13

User Story 4	Admin	integrate the app with open GIS APIs (OpenStreetMap, Google Maps)	I can display accurate base maps	- Map tiles load from OSM/Google. - API key properly configured. - Map renders smoothly on all devices.	✔ Completed ▾	● High ▾	8
User Story 5	Admin	manage (add/edit/delete) charging stations	I can keep platform data updated	- CRUD (Create, Read, Update, Delete) operations functional. - Database syncs with map. - Admin confirmation messages displayed.	✔ Completed ▾	● High ▾	5
User Story 6	Admin	add or update charging station coordinates using a geomatics interface	data stays accurate	- Admin can add/edit coordinates. - New station appears instantly on the map. - Data stored in database.	✔ Completed ▾	● High ▾	13
User Story 7	Charger User	receive real-time navigation to the selected station	I can reach the station efficiently	- User clicks “Navigate” and route appears. - Route updates with GPS movement. - Distance and ETA displayed.	✎ In progress ▾	● High ▾	13

User Story 8	Charger User	filter stations by charging type (fast/normal) or network	I can find suitable stations for my car	- Filter options appear on map. - Selecting filters updates displayed stations dynamically.	✔ Completed ▾	● Medium ▾	5
User Story 9	Charger User	update my profile (name, vehicle type, battery range, add station)	route suggestions are accurate	- User can update personal data. - Updated data is saved to the database. - Range influences route results.	✔ Completed ▾	● Medium ▾	5
User Story 10	Admin	send broadcast alerts (maintenance, new stations)	users stay informed about updates	- Admin dashboard includes alert tool. - Alerts appear as notifications in app. - Logged users receive alerts instantly.	🕒 Not started ▾	● Medium ▾	13
User Story 11	Admin	analyze usage data (popular stations, routes)	I can make data-driven decisions	- Dashboard shows station frequency & usage charts. - Data exportable in CSV format.	👁 Under review ▾	● Medium ▾	8

User Story 12	User	read and leave reviews about a station's quality	I can share my experience and help others	- User can rate and comment. - Reviews displayed under each station. - Stored securely in database.	 In progress ▾	Low ▾	8
User Story 13	Admin	export station and usage data for reporting	I can share insights with partners	- Admin can export reports in CSV or PDF. - Export button available on analytics dashboard.	 In progress ▾	Low ▾	5
User Story 14	Admin (optional)	integrate payment or booking systems	users can pay or reserve charging slots	- Payment option visible in station details. - Integration with D17 or eDinar API simulated. - Payment confirmation stored.	 Not started ▾	Low ▾	13

Sprint Summary			
Sprint	Focus	Total Estimated Effort	Goal
Sprint 1	Core system setup, map display, admin management	29.	Deliver functional map with charging stations and admin control
Sprint 2	Smart navigation, real-time updates, personalization	49.	Enable personalized routing and live data accuracy
Sprint 3	Analytics, user interaction (reviews & export)	21.	Add analysis and user engagement tools
Sprint 4	Alerts, payments	26.	Add security features & paied optional features

Release Plan 1					
Release	Duration		Objective	Included Features	Value Delivered
Release 1: Core Platform Launch	Sprint 1 (2 weeks) 3 Nov - 17 Nov	User Story 2	Deliver a functional MVP so users can view charging stations and navigate the map.	- User authentication - Basic user profile (vehicle type, battery range) - Map integration using OpenStreetMap/Google Maps - Admin panel: Add/Edit/Delete charging stations - Basic filtering (fast/normal chargers) - Static station details (name, type, coordinates)	- Users can finally find EV chargers in Tunisia - Functional map + station list - Admins can maintain accurate station data - System deployed for internal testing
		User Story 1			
		User Story 5			
		User Story 4			
	Sprint 2 (2 weeks) 3 Nov - 17 Nov	User Story 9	Add smart navigation and personalization	- Real-time navigation - GPS tracking - Filters (type, speed) - Real-time station status - Update profile	- Navigation route visible & updates - Filters dynamically update markers - Status color-coded and refreshed - Profile updates stored
		User Story 8			
		User Story 7			
		User Story 3			
		User Story 6			

Release Plan 2					
Release	Duration		Objective	Included Features	Value Delivered
Release 2: Analytics, Engagement & Advanced Features	Sprint 3 (2 weeks) 17 Nov - 1 Dec	User Story 12	Introduce user engagement & analytics	- Reviews + Ratings - Usage Analytics Dashboard - Export CSV/PDF	- Reviews appear under stations - Dashboard visualizes usage - Export formats working
		User Story 11			
		User Story 13			
	Sprint 4 (2 weeks) 17 Nov - 1 Dec	User Story 10	Integrate advanced extensions	- Admin Alerts - Payment/Booking system	- Alerts visible to all users - Payment simulation runs
		User Story 14

Sprint Satisfaction			
Sprint	Satisfaction Level	Explanation	Element NOT included
Sprint 1	★★★★★ 100%	All core features delivered + polished UI	All done
Sprint 2	★★★★☆ 90%	Route planner + GIS layers + advanced UX	- See station’s real-time status (occupied/free) - Export data, Not needed in a front-end map
Sprint 3	★★★☆☆ 70%	Delivered analytical layers but no review system	- Export data, Not needed in a front-end map - Reviews, Not implemented
Sprint 4	★☆☆☆☆ 30%	Integrate advanced extensions in progress	- Admin Alerts - Payment/Booking system

31

Sprint Retrospective

What Went Well	What Could Be Improved	Improvements For Next Sprint
• Strong collaboration: tasks were well distributed • Good technical quality: UI polished, map responsive, clean code • GeoJSON layers worked perfectly • Leaflet.js integrations were smooth (heatmap, coverage, routing) • Problem-solving improved over time (debugging JSON, fixing interactions) • Final product visually clear and functional	• Authentication simulated (LocalStorage, not database) • Route planner could be enhanced with multiple stations • Some UI panels could be modularized for scalability • Dataset could include: charger power curves, real-time data • Lack of thorough mobile testing	• Use Firebase or a backend API for real authentication • Add server for storing reviews, user data, bookmarks • Implement real-time station availability • Improve performance with clustering for many stations • Add CI/CD or deployment version on GitHub Pages

12-WEEK SCRUM TRANSFORMATION ROADMAP

Successfully implement Scrum methodology in your organization with this proven timeline

Foundation Setup

- Create the JIRA project
- Define team roles
- Write Product Vision
- Product Backlog
- Create Epics
- Conduct basic training

Week 1-2

First Sprint Execution

- Sprint 1 goals
- Sprint in JIRA
- Daily scrum, Sprint Review & Sprint Retrospective

Week 3-4

Process Refinement

- Add missing backlog items
- Improve communication between developers
- Start optimizing the JIRA workflow
- Improve estimation technique

Week 5-6

Velocity Stabilization

- Measure team velocity
- Based on velocity → plan remaining sprints
- Release a stable beta version of your application

Week 7-8

Advanced Practices

- Story mapping for large features
- Release planning
- Start implementing complex features
- Testing

Week 9-10

Scaling Preparation

- Prepare for multi-team collaboration (GIS + Front-end + Admin)
- Final documentation in JIRA
- Prepare a final demonstration
- Improve processes for future extensions

Week 11-12
